EDUCATION

Georgia Institute of Technology – Atlanta, GA

Bachelor of Science in Aerospace Engineering

August 2021 – December 2023

GPA: 3.53/4.00 Magna Cum Laude

PROFESSIONAL EXPERIENCE

Amazon Robotics

Shreveport, LA

Product Launch Engineer

July 2025 – Present

- Built and deployed a real-time station health monitoring platform from scratch, owning full technical architecture, API integrations with SharePoint and Slack, and post-launch iteration based on direct user feedback across 160+ users and 4 sites.
- Acted as internal solutions engineer across cross-functional teams, translating operational requirements into custom tooling and data workflows, including a station ranking system across 50+ metrics used for network-wide decision making.
- Detected a 5% pick rate degradation before official dashboards flagged it using Python, applied root cause methodology to identify product configuration failures, and recovered 2 UPH within 3 weeks through cross-functional corrective action.
- Championed a software fix deployed network-wide after building a structured root-cause analysis covering 500+ station moves, reducing station hops by 40 to 60% and recovering 750 minutes of daily productivity.
- Developed onboarding guides, reference documentation, and training materials adopted by 200+ associates and 20+ operations leaders, reducing friction and accelerating adoption of new workflows.
- Automated a manual 4 to 5 hour weekly data extraction workflow down to 30 minutes using Python, detecting a 5% pick rate degradation before official dashboards flagged it and root-causing 80%+ of issues to a product configuration error.

VisionNav Robotics

Atlanta, GA

Project Engineer II

March 2024 – July 2025

- Owned end-to-end technical implementation across \$2M+ AGV automation deployments at 5+ client sites, designing custom solutions, integrating WMS platforms via REST APIs, and troubleshooting issues directly without escalating to engineering.
- Supported 50+ technical pilots and product evaluations with engineering and executive stakeholders, architecting solutions tailored to customer workflows and converting 10+ into high-value agreements including a 100-vehicle PO.
- Converted a Day-1 POC failure into VisionNav's largest partnership by rapidly diagnosing the technical root cause, proposing a modified solution architecture on the spot, and rebuilding executive trust in real time, securing a \$600K commitment.
- Built standardized onboarding documentation, training programs, and integration guides for 45+ engineers and integrators, creating scalable resources that reduced ramp-up time and ensured consistent deployment execution.
- Translated complex customer technical requirements into structured specifications for engineering teams, acting as the primary interface between customer stakeholders and internal product and R&D teams.
- Increased sales pipeline by 30% through consultative technical engagement, translating complex automation capabilities into clear customer value propositions across manufacturing and logistics verticals.

INVOLVEMENT

Hytech Racing, Formula SAE (1st Place in Key Events, 2nd Overall Worldwide)

Atlanta, GA

Aerodynamics & Composites Engineer

September 2021 – May 2023

- Applied CFD and FEA simulation to iteratively optimize component design, improving vehicle performance by 15% and reducing weight by 20% through data-driven design decisions.
- Trained 20+ junior engineers on design and fabrication workflows, shortening onboarding time by 25% through structured documentation and hands-on knowledge transfer.
- Coordinated cross-functional planning across 10+ team members under tight competition deadlines, finishing 2nd overall worldwide in Formula SAE.

SKILLS & QUALIFICATION

Technical: AI-Code, Python, SQL, Tableau, JMP, MATLAB, CAD, SharePoint API, Slack API, REST APIs, WMS integration

Functional: Technical pre-sales, pilot support, API integration, program development, root cause analysis, technical documentation

Professional: Cross-functional stakeholder management, executive presentations, sales enablement, Agile workflows

Languages: English (Fluent), Bahasa Indonesia (Fluent), Mandarin Chinese (Fluent)
